

quarryHog for Operators and Leadmen

quarryHog Mobile

quarryHog mobile provides operators with a constant connection to the opsCenter. This means that they can receive new tasks, update current tasks, record consumables, perform inspections and monitor equipment location all in real-time. This takes the headache and the paper-pushing out of the more mundane, but essential, tasks in an operator or lead man's day. quarryHog mobile is an incredible productivity booster that is sure to help both operators and supervisors alike.

What is quarryHog?

quarryHog is a comprehensive fleet management system for small mines, quarries and aggregates. It optimizes production and maximizes utilization by leverages real-time data and GPS tracking. quarryHog also boosts safety, as it boasts a sleek digital inspection system that allows for high level maintenance ops. On top of increasing safety, this allows for quarries to get the absolute most out of their equipment.

Ditch Paperwork.

Track consumables, engine/impact hours and inspections digitally. Paper is easy to lose, a pain to manage and not available immediately. quarryHog digitizes every aspect of quarry day-to-day, making safety and efficiency at a higher level, more attainable than ever before.

Track Equipment In Real-Time.

quarryHog integrates with next-level technology to track the precise location of equipment, helping to optimize current shifts and plan upcoming shifts. Integrated with the production scheduling and control system, quarryHog's real-time location tracking system integrates with a GPS transponder overlaying real-time location information of equipment over a navigation display. This means that operators don't have to waste time hunting down equipment at any time during their shift.

Digitized Workplace Exams and Pre/Post-Op Inspections

Tracking and analyzing equipment performance is crucial to consistent quarry performance. quarryHog's customizable digital inspection process ensures precise auditing.

Update Fuel Consumption, Time Sheets and Other Forms

Enable quick operational assessments from the command center, streamline health and safety inspections, and support compliance with environmental impact regulations.

Track Consumables and Engine Hours

quarryHog digitizes the process of monitoring engine and impact hours. This makes it easy to keep track of the engine hours on any piece of equipment, anywhere in the quarry, at any time.
